

DRINKING WATER WARNING

***E. COLI* MAXIMUM CONTAMINANT LEVEL VIOLATION**

ESTE INFORME CONTIENE INFORMACIÓN IMPORTANTE ACERCA DE SU AGUA POTABLE. HAGA QUE ALGUIEN LO TRADUZCA PARA USTED, O HABLE CON ALGUIEN QUE LO ENTIENDA.

Vending Machine water is contaminated with *E. coli* bacteria.

E. coli bacteria were found in the water supply on 12/2/24. These bacteria can make you sick, and are a particular concern for people with weakened immune systems.

What should I do?

DO NOT DRINK THE WATER, DISPOSE OF WATER.

E. coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Microbes in these wastes can cause diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a special health risk for infants, young children, some of the elderly and people with severely compromised immune systems.

The symptoms above are not caused only by organisms in drinking water. If you experience any of these symptoms and they persist, you may want to seek medical advice. People at increased risk should seek advice about drinking water from their health care providers.

What happened? What is being done?

Bacterial contamination can occur when increased run-off enters the drinking water source. It can also happen due to a break in the distribution system (pipes) or a failure in the water treatment process.

As part of our rigorous, routine testing program and protocols on all of our water vending machines,

On 12/2/24 *E.coli* and Total coliform bacteria was detected in the water. A follow-up set of (3) water samples were gathered on 12/4/24 and confirmed the presence of bacteria (total coliform, only) in one of the (3) samples. Please discard of any water purchased recently.

We were notified of the presence of bacteria on 12/5/24 and the machine was shut down the same day.

We will inform you when tests show no bacteria. We anticipate resolving the problem by 12/11/24.
